

# UNLOCKING THE FUTURE OF AIR MOBILITY IN JAPAN

MASC is building the path to a safer, faster, cleaner sky.

From the congested cities of Japan to the remote islands scattered across the sea, the country faces complex transportation challenges every day.

But these very obstacles—over 6,800 islands, dense urban centers, and a rapidly aging infrastructure—are what make Japan the perfect testing ground for a new kind of mobility.

Based in Kurashiki, MASC is a platform bringing together manufacturers, researchers, and government bodies to accelerate Japan's eVTOL ecosystem.

## Messages from Our Valued Partners

From EHang

(excerpt from message)

EHang is honored to have MASC as one of our most valued and trusted partners in Japan. Together, we remain committed to leading the evolution of UAM in Japan and setting new benchmarks for the industry.

From Autoflight

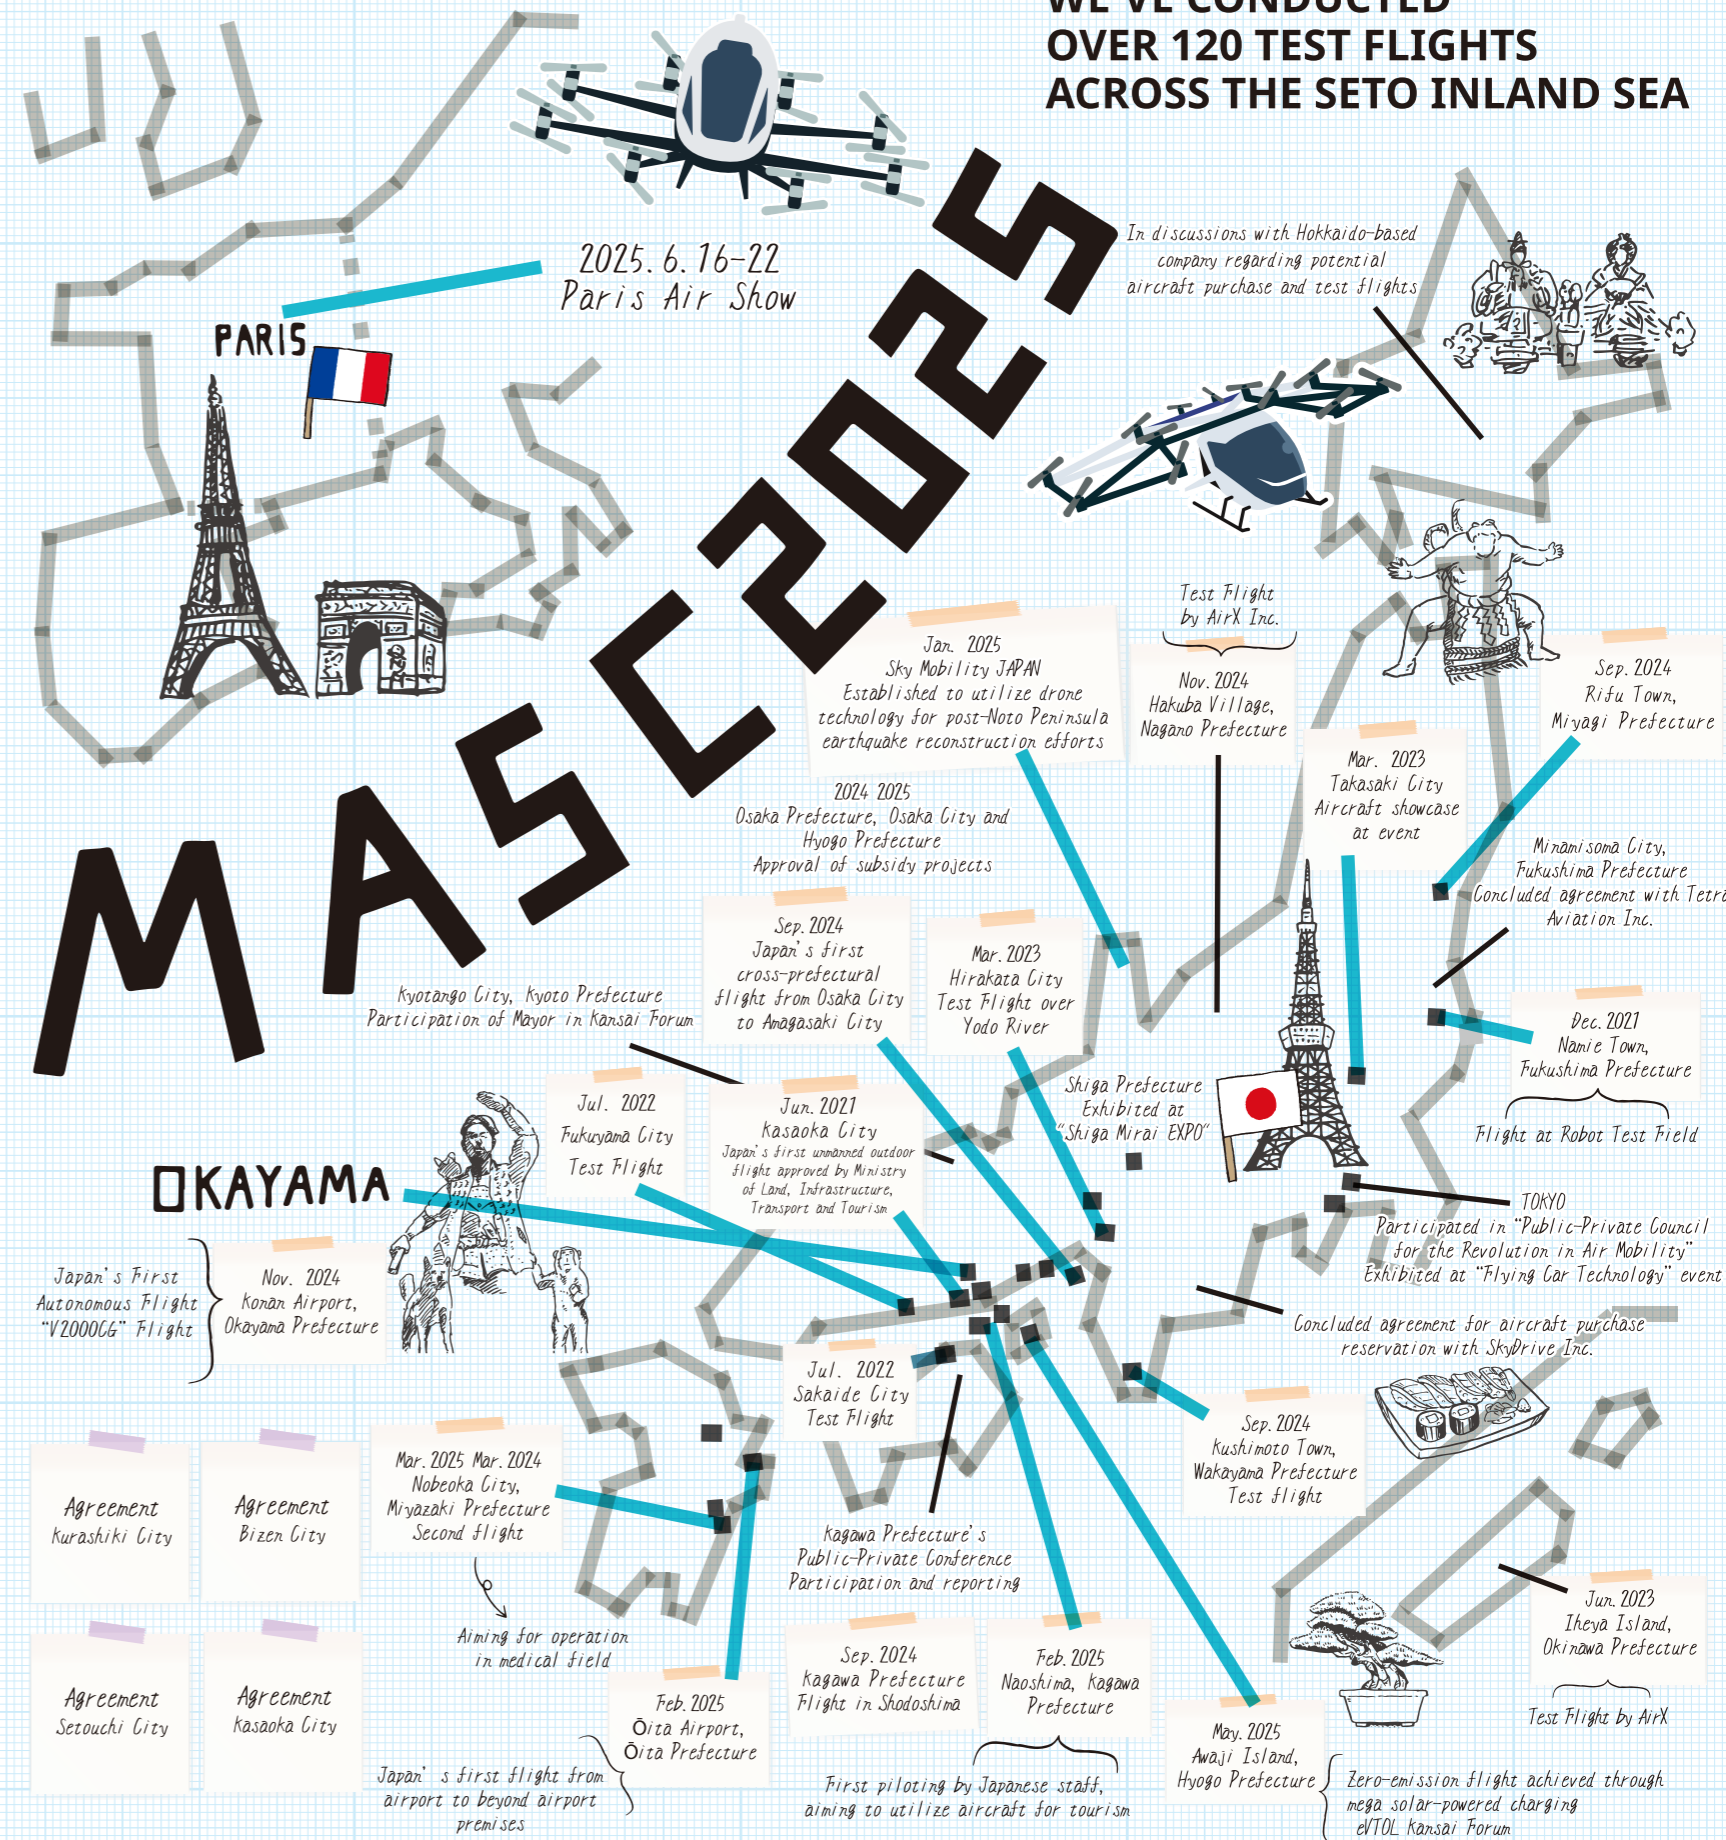

(excerpt from message)

AutoFlight takes great pride in our strategic partnership with MASC, a visionary leader advancing Japan's urban air mobility revolution. Together, we've achieved remarkable milestones that underscore our shared commitment to redefining aerial transportation.

From Nobeoka City, Miyazaki Prefecture

MASC's flight over Nobeoka City with an eVTOL brought great excitement and elation to the people of Nobeoka! Thank you so much!!

## Partnerships in the Japanese Market

Focusing on the Seto Inland Sea, we are collaborating with local governments and companies across Japan to conduct test flights and host events aimed at increasing public acceptance. For involvement in the Japanese eVTOL market, please contact MASC.
